

Contributions:

Emely Diaz (25%)

- Update/adding UI components
- Calendar view and segues
- Adding activities to Map Preferences

Kayla Han (25%)

- Authentication
- Profile settings
- Login and registration screens
- Firebase database implementation for user settings/personal data

Sourav Banerjee (25%)

- Location access and permissions
- Map setup
- Map markers
- Locations TableView
- Firestore integration
- Storyboard flow and segues

Sean Dudo (25%)

- Timer checklist
- Timer done screen with results

Deviations:

- Kayla is still working on fully debugging database features and is working on dealing with async calls when reading from the database
- Emely is still working on the full function of the calendar view transition to the individual day data view controller. Took longer than expected to implement the calendar.
- Sean's UI on the timer is quite basic and will want to improve to be more compatible with the app
- Sourav continues to work on the location and location-related pages of the application. He implemented the map, markers, and the list of locations. Next, he will work on integrating the filters into the service.
